

2007+ Suzuki SX-4 Front Skidplate Install Instructions

by Primitive Racing

We would like to thank you for your purchase of our front skidplate for your Suzuki SX-4. We hope you fully enjoy your new skidplate and bash the heck out of it. Below are the simple instructions for installing your new skidplate.

Sincerely,

Primitive Racing

Hardware:

Qty = 4 M6 x 1.00 25mm Bolts (front) Qty = 2 M6 x 1.00 30mm Bolts (rear)
Qty = 6 Washers

Tools Needed:

10mm Wrench or Socket

Jack Stands or Car Ramps

A friend to help hand you tools and a cold beer. (nice but not necessary)

Step 1. Place car on jack stands or car ramps, apply parking brake. (PLEASE BE SAFE!)

Step 2. Using your 10mm wrench/socket remove the 4 front bolts and 2 rear bolts that hold your factory splash shield in place. Leave the shield as our plate mounts over the factory plastic shield.

Step 3. Slide your new Primitive Racing skidplate into place and finger tighten the 4 front bolts. Be sure to use the supplied 25mm bolts and washers.

Step 4. Now go back and tighten all 6 bolts starting with the 4 front bolts. DO NOT OVER TIGHTEN!! 10lbs torque should do it. After the fronts are tight, then repeat for the 2 rear bolts.

Step 5. That's it. You've installed your new skidplate. Grab some "beverages" and sit back and enjoy your new plate.
